

REFACTORING FRAUD DETECTION

Refactor the FraudRadar class. You can make any changes you see that are needed in code or tests. See the tests for more information.

Code Requirements:

- All the tests must pass.
- The code should fulfil OOP and SOLID principles.
- The code should be maintainable.
- The code should be extensible.
- You should apply defensive programming practices.
- Receive the file path is not nice. Think and change the signature and make it cooler.
